

As a user, I want to view the open hours for each drop-off site, so that I can be sure that I won't waste my time going to one of the sites and found it closed.

Detailed work tasks to accomplish the story

1. Add open time and close time attributes to the drop-off sites class, with getters and setters
1. Add a open time spinner and a close time spinner on the drop-off site edit window for location employees, to allow location employees to add the open hours at that drop-off site and update if there is a change
2. Add a textview on the drop-off site information page to display the open and close time for that specific site

Acceptance criteria:

- . Given the functionality has just been implemented and the person is a manager or a location employee, when the person opens the edit page for the first time, a window should pop up and ask the person to set a default hour for the site if the person wants
- . Given the person is a manager or a location employee, when the close time is set to be earlier than the open time, a window should pop up to give the editor a warning, and should have options to confirm or go back to re-edit
- . Given the person is a manager or a location employee, when the site is closed for the day, then the person is able to check a checkbox on the edit window which writes "Closed".
- . Given the person is any types of users, when a user enters the site information page, then the hour should be displayed on the page.
- . Given there is a default hour, when midnight reached, then the open hour for the new day should be automatically set to the default hour
- . Given the person is a manager or a location employee, when he enters the edit page for the site at any time of the day for whatever numbers of times, then the hour should be able to be updated

Done criteria:

- . The hour is editable only to manager and location employees
- . The hour is visible to all types of users
- . The team has tested that the hour of all shops can be updated, for as many times as wanted throughout the day
- . The team has made sure the hour is automatically set to default at midnight each day
- . The team has made sure this new functionality works for all platforms (phone, tablets etc) that the app runs on
- . The aesthetics of the layout is approved by all team members.
